

LOW-CODE APPLICATION DEVELOPMENT USING ZOHOCREATOR

EXPERIMENT -1

NAME : Kamali RJ **ROLL NO :** 240701225

1. Aim

To study and compare the Traditional Application Development approach with the Zoho Low-Code Development approach based on development process, coding effort, development time, cost, maintenance, and overall efficiency.

2. Introduction to Traditional Approach

Traditional Application Development is the conventional method of building software by writing source code manually using programming languages. It follows the SDLC phases: requirement analysis, design, coding, testing, deployment, and maintenance. It offers high flexibility but requires more time, cost, and skilled developers.

3. Introduction to Low-Code

Low-Code Development enables applications to be built using visual interfaces, drag-and-drop components, templates, and workflow automation with minimal coding. Zoho Creator is a popular low-code platform that supports rapid application development using forms, reports, workflows, and Deluge scripting.

4. Diagram for Stages in Traditional Approach

Stages in Traditional Approach (SDLC)

5. Diagram for Steps in Low-Code

Steps in Zoho Low-Code Development

6. Comparative Analysis

Parameter	Traditional Development	Zoho Low-Code Development
Method	Manual coding	Visual drag-and-drop
Coding	High	Low
Development Time	Weeks or months	Hours or days
Technical Skills	Advanced	Basic
Development Cost	High	Low
Maintenance	Complex	Easy
Deployment	Manual	Quick cloud deployment
Database	Manual	Built-in support
Workflow	Requires coding	Visual builder
Customization	Very High	Moderate to High
Scalability	Highly scalable	Suitable for business apps

Productivity	Moderate	High
Target Users	Professional developers	Developers & business users

7. Result

Traditional development provides greater flexibility and customization but requires extensive coding and longer development time. Zoho Low-Code Development enables faster application development with minimal coding, lower cost, and easier maintenance.
